About SPC's Heads of Fisheries Meetings

The SPC Heads of Fisheries Meeting is part of SPC's corporate governance structure. SPC's main governing councils, the biennial Conference of the Pacific Community and the annual Committee of Representatives of Governments and Administrations (CRGA), are the ultimate decision-making bodies for the organisation and decide the strategic direction, annual work-programme and budget. However, SPC is large compared to other Pacific Island regional organisations, and its work-programme covers a number of different sectors. CRGA obtains advice from several sectoral specialist councils, and the Heads of Fisheries meeting is one of these.

The Heads of Fisheries meeting covers both of SPC's Fisheries Programmes: Oceanic and Coastal. It has historically placed more emphasis on Coastal Fisheries Programme (CFP) business than the Oceanic Fisheries Programme (OFP) because the work of the OFP is also guided by several other regional meetings involving member countries, including the Scientific Committee for the Western and Central Pacific Fisheries Commission and the Forum Fisheries Committee. However, HoF is the conduit through which any consensus formal recommendations of SPC member country fisheries specialists reach the SPC CRGA, which itself governs the entire work programme, including both OFP and CFP.

HoF also remains the only opportunity for Pacific Island fisheries heads to generally discuss domestic and reef fisheries issues and problems together, and to provide essential feedback to the direction of the SPC Coastal Fisheries Programme. Although the CFP convenes occasional specialist meetings, such as recent meetings on coastal fisheries management and aquaculture, these are to advise on special topics, and only take place at irregular intervals. The Heads of Fisheries meeting is intended to cover the entire range of work of national and territorial fisheries administrations. It may even discuss issues outside the current range of the SPC work-programme, and this "big-picture" view of fisheries is essential for longer-term planning and is also of considerable assistance to other agencies, regional NGOs and donors interested in national as well as regional issues.
